

HYDROGEN FAST FACTS

Colorless, odorless, tasteless, non-toxic and non-poisonous

When burned, H₂ produces water vapour and no carbon emissions

Most abundant and lightest molecule in the universe

An efficient way to store and transport energy

Acts as an energy carrier, not an energy source

When produced with renewable electricity, the process is carbon neutral

H₂ POSSIBILITIES

Hydrogen has the potential to play an important role in a cleaner energy future

Gas Network

Industrial Feedstock

Export

Power Generation

Heavy transport

Storage
